

NETWORK SECURITY TESTING

DATA SHEET

What is a Network Security Assessment / Penetration Test?

A penetration test, often referred to as pen testing, is an evaluation of your organization's network security. The purpose of a penetration test is to identify security weaknesses that expose your environment to malicious attacks. Unlike a traditional vulnerability assessment that only identifies security vulnerabilities within the tested environment, a penetration test usually takes it a step further by demonstrating potential impact. Demonstrating a potential impact stemming from the exploitation of a security weakness allows an organization to determine the severity of the exploited security vulnerability.

Over a number of years performing penetration testing engagements, Vonahi Security understands the needs and expectations of customers that demand high quality, valuable, and comprehensive information security services. Performing a penetration test allows your organization to perform an assessment on more than just the security vulnerabilities present within the environment.

By performing a penetration test, your organization can gain an understanding of:

- > Security vulnerabilities present within the environment
- > Incident response procedures, including monitoring and alerting
- > Potential impact of a security breach
- > Effectiveness of implemented technical and compensating controls

Vonahi Security offers several different penetration testing services to guide your organization to a better security posture and program. Below are information pertaining to our three most commonly requested penetration testing services:

INTERNAL NETWORK PENETRATION TESTING

Using a device connected to your internal environment, our consultants will discover security vulnerabilities present within the internal network environment. These activities simulate that of a malicious attacker.

EXTERNAL NETWORK PENETRATION TESTING

Assuming the role of a malicious attacker from the public Internet, our consultants will identify security flaws within your external network environment. These flaws can include patching, configuration, and authentication issues.

WIRELESS NETWORK PENETRATION TESTING

Identify areas within your wireless infrastructure that pose a security concern. These weaknesses could include rogue access points, wireless signal bleed, weak encryptions, and more. Our consultants will also review your wireless configurations.

Our Penetration Testing Methodology

Based on our professional experience, research, and the activities performed by modern-day attackers, Vonahi Security consultants follow a penetration testing methodology that combines both traditional and new attack techniques to provide quality penetration testing services.

INTELLIGENCE GATHERING

Information about your organization is gathered to map out the environment. In the case of an external penetration test, information such as domains, IP addresses and ranges, compromised email addresses, and employee information is discovered.

VULNERABILITY ANALYSIS

Once the targets have been identified, Vonahi Security uses both automated and manual vulnerability analysis tools to identify security flaws.

POST-EXPLOITATION

Demonstration of impact is performed by attempting to escalate access into systems and/or sensitive data within the environment.

THREAT MODELING

An assessment of the organization's business is performed, which includes identifying the most critical business resources. From this analysis, the consultant identifies the best approach to formulating an attack against the exposed security flaws.

PERFORM EXPLOITATION

Depending on the security flaws exposed, exploitation is performed to attempt gaining unauthorized access to systems and/or sensitive data.

TIMELY REPORTING

Documentation is collected, reviewed, and presented to your organization in a clear, concise, and effective manner. In addition to supporting data, strategic and technical recommendations are provided to help your organization with successful remediation.

What You Get

At Vonahi Security, we understand the demands and expectations for quality information security services. As part of our network penetration testing services, your organization can expect the following:

Project Management & Planning

Daily Status / Progress Reports

Quality Deliverables & Presentations

Experienced & Certified Security Experts

ABOUT US

Vonahi Security is a cybersecurity consulting firm that offers comprehensive information security services. Our team is comprised of security experts experienced in offensive and defensive operations, allowing us to provide quality information security services. We ensure your organization is successful with achieving its security goals and remaining one step ahead of malicious adversaries.

HELLO WORLD. MEET MODERN SECURITY.
